

INNOVATIVE ALL-HAZARDS RESPONSE AND INCIDENT MANAGEMENT

The 4QTRS core solution portfolio is focused on information sharing and enabling a communication and collaborative framework to enhance emergency response. Our mission is to bring innovation to our customers who are responsible for the daunting task to ensure public safety, enable emergency response and secure critical infrastructure. Too often solutions deployed in this market are proprietary and provide challenges for creating interoperability between multi-vendor solutions.

Just as critical as the incident response, is the ability to proactively monitor to mitigate risk and lessen the impact of an incident. The solutions highlighted below provide situational awareness by enabling integration of many systems and devices already in use by the various agencies. We deliver an integrated framework that enables information sharing within the agency, across multiple jurisdictions and to many other authorized stakeholders.

4QTRS provides an integrated and interoperable suite of products that enable multi-agency, multi-jurisdictional situational awareness and disaster response solutions to numerous municipal, state, federal, and international customers. Our portfolio also improves school safety by proactive notification of incidents which may compromise campus safety and improve communications and collaboration between school officials and emergency responders. Our solutions enable integration of many systems and devices into our geospatial dashboard, enabling monitoring and control directly from the dashboard. These solutions truly deliver end-to-end situational awareness.

Our Suite of Solutions include:

 **ViewPointe** More than a Common Operating Picture (COP), ViewPointe is an Enhanced Information Sharing Platform providing a single dashboard display of incident details, resource availability and a robust management operations tool. This information is shared in real-time to all participants and facilitates collaboration among incident responders delivering comprehensive situational awareness. Video: <https://youtu.be/mfxogh6Ot7c>

 **ViewPointe** ViewPointe CAD-to-CAD gateway framework enables bi-directional exchange of information between all CAD systems connected to the ViewPointe. ViewPointe CAD-to-CAD supports automatic aid, mutual aid and catastrophic incident requests. During a widespread incident, it is critical to quickly access information from many locations and many devices.

 **SafePointe** SafePointe provides the ability to enhance school safety by bringing many information sources into a single tool to provide stakeholders with real-time information to make informed decisions to enhance incident response and deliver real-time situational awareness.
