

Company Overview

Situational Awareness is the key initial step for stakeholders responsible for managing, monitoring and securing critical infrastructure and essential energy sources that fuel a nation's economy. Situational Awareness is not only being conscious of spatial surroundings at a specific moment in time, it is having the ability to quickly and intelligently respond to an incident. Just as critical as the incident response, is the ability to proactively monitor to mitigate risk and lessen the impact of an incident.

4QTRS Holdings mission is to bring innovation to our customers who are responsible for the daunting task to ensure public safety, enable emergency response and secure critical infrastructure. Too often solutions deployed in this market are proprietary and provide challenges for creating interoperability between multi-vendor solutions. Our mission is to deliver solutions with open and standards based architecture to foster disparate system interoperability. Our executive leadership has more than 50 years' experience in Department of Defense (DOD), public safety technology and solution development. The ability to enable information sharing and real-time situational awareness across all critical stakeholders to mitigate risk and enable intelligent response is our mission.

4QTRS Holdings provides an integrated and interoperable suite of products that enable multi-agency, multi-jurisdictional situational awareness and disaster response solutions to numerous municipal, state, federal, and international customers.

Our Suite of Solutions includes:

ViewPointe An enhanced information sharing platform that brings together critical information sources into a common operating picture. ViewPointe enables disparate system integration, multi-agency collaboration and incident response, enables proactive monitoring of critical assets and real-time event management.

SafePointe SafePointe provides the ability to enhance school safety by bringing many information sources into a single tool to provide stakeholders with real-time information to make informed decisions to enhance incident response.

InPointe Mobile panic button providing real-time access to resources and critical incident information for emergency or non-emergency situations.

TexSTAR Provides a mobile application for field assessments and integrated dashboard to provide real-time access to collected data. TexSTAR was originally developed for damage assessments; however, the robust custom forms module enables virtually any field assessment activity.

4QTRS Holdings has three offices in the United States:

- Headquarters is located in Vicksburg, MS.
- Research and Development division is located in Yakima, WA.
- Business Development, Sales & Marketing is located in Tampa, FL

INNOVATIVE ALL-HAZARDS RESPONSE AND INCIDENT MANAGEMENT
